"Nucleotide sequence of the cellobiohydrolase gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Trichoderma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            beta-cellobiohydrolase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TIGR; MJ1085;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               EMBL; U67551; AAB99095.1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       435
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           51 IIEYIK
                                                                                                                                                                FUNCTION: THE BIOLOGICAL CONVERSION OF CELLULOSE TO GLUCOSE GENERALLY REQUIRES THREE TYPES OF HYDROLYTIC ENZYMES:

(1) ENDOGLUCANASES WHICH CUT INVERNAL BETA-1,4-GLUCOSIDIC BONDS;

(2) EXOCELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLOBIOSE FROM THE NONREDUCING END OF THE CELLULOSE POLYMER CHAIN;

(3) BETA-1,4-GLUCOSIDASES WHICH HYDROLYZE THE CELLUSBIOSE AND OTH SHORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.

SHORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.

CAPALLYTIC ACTIVUTY: Hydrolysis of 1,4-beta-D-glucosidic linkages in cellulose and cellotetraose, releasing cellobiose from the nor reducing ends of the chains.

SIMILARITY: BELONGS TO CELLULASE FAMILY C (FAMILY 7 OF GLYCOSYL
                                                                                                                                 HYDROLASES).
SIMILARITY: CONTAINS 1 FUNGAL-TYPE CELLULOSE-BINDING DOMAIN (CBD).

FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.
THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE SORTING OF HETEROGENEOUS CELL TYPES.
SORTING OF HETEROGENEOUS CELL TYPES.
SUBCELLULAR LOCATION: Type I membrane protein (Potential).

ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.
TISSUE SPECIFICITY: HIGHLY EXPRESSED IN BRAIN, CEREBELLUM, KIDNEY. LUNG, PANCREAS, AND GASTRIC MUCOSA SHOW A WEAK EXPALSO EXPRESSED IN CERTAIN LIVER AND KIDNEY CARCINOMAS.
SIMILARITY: CONTAINS 5 CADHERIN DOMAINS.

SUBCELLULAR LOCATION: Type I membrane protein
DEVELOPMENTAL STAGE: EXPRESSED IN FETAL, NEWB
TESTIS BUT NOT IN 21-DAY-OLD OR ADULT TESTIS.
SIMILARITY: CONTAINS 5 CADHERIN DOMAINS.

"CDNA cloning and expression of human glutamyl aminopeptidase aminopeptidase A).";
Genomics 17:657-664(1993).
Genomics 17:657-664(1993).
1- FUNCTION: APPEARS TO HAVE A ROLE IN THE CATABOLIC PATHWAY OF TRENIN-ANGIOTENSIN SYSTEM. PROBABLY PLAYS A ROLE IN REGULATING REMIN-ANGIOTENSIN SYSTEM. PROBABLY PLAYS A ROLE IN REGULATING GROWTH AND DIFFERENTIATION OF EARLY B-LIMPAGE CELLS.
1- CAPALYTIC ACTIVITY: Release of a N-terminal glutamate (and to lesser extent aspartate) from a peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CARBOHYD

COPACTOR: MOLYBDENUM (MOLYBDOPTERIN) AND SELENOCYSTEINE. THE

ACTIVE-SITE SELENOCYSTEINE IS ENCODED BY THE OPAL CODON, UGA.

MAY BIND A 4FE-45 CLUSTER.

MAY BIND A 4FE-45 CLUSTER.

PATHWAY: ANAEROBIC NITRATE RESPIRATION.

SUBUNIT: FORMATE DEHYDROGENASE IS A MEMBRANE-BOUND COMPLEX, FORMED

BY SUBUNITS ALPHA, BETA AND GAMMA.

SUBCELLULAR LOCATION: Cytoplasmic (Potential).

SUBCETION: BY NITRATE UNDER ANAEROBIC CONDITIONS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SIMILARITY: BELONGS TO THE PROKARYOTIC MOLYBDOPTERIN-CONTAINING OXIDOREDUCTASE FAMILY.

                                                                                                                                                                                                         This clone was derived from human PAC library RPCI-5, prepared by Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu) using the method described by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (10-SEP-2000) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St.
                                                                                                                one male donor.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by This sequence was finished as follows unless otherwise noted: restriction digest.

MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov , or see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

This clone was derived from human PAC library RPCI-5, prepared Pieter de Jong and coworkers at the Roswell Park Cancer Institu (http://bacpac.med.buffalo.edu) using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994). The library is one male donor.
The clone may be obtained either from Genome Systems, Institute ğ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: REMEL; Sw: SWISSPROT; Tr:, TREMEL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6

IMPORTANT: This sequence is not the entire insert of clone RP3-33474 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true left end of clone RP3-33474 is at 1 in this sequence. The true left end of clone RP3-31021 is at 12579 in this sequence. The true right end of clone RP3-1015 is at 22579 in this sequence. The true right end of clone RP3-1015 is at 22579 in this sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. RP3-33474 is from the library RPCI-3 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted (21-DEC-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IMPORTANT: This sequence is not the entire insert of clone RPI1-35D18 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true right end of clone RPI1-53D18 is at 106582 in this sequence. The true right end of clone RPI1-93N13 is at 100 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RPI1-53D18 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBI, Sw., SWISSPROT; Tr., TREMBI; Wp., WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (06-FEB-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. Cambridgeshire, CB10 1SA, UK. E-mail enquires: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk On Oct 2, 1997 this sequence version replaced gi:2052030. IMPORTANT: This sequence is the entire insert of clone 167A14. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations annotated may not be the overlapping note of the overlapping clone name. ted may not be found in the sequence clone as we submit sequences with only a small submission Note that the variations corresponding

as described above. of of

This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre chromosome 6 mapping group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6/
This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' The true left end of clone 167A14 is at 1 in this sequence. true right end of this clone is at 132790. feature key

Institute by the group of Pieter de Jong. .67A14 is from the library RPCI1 constructed at the Roswell Park

It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
